Developing risk management in Government

The Government Actuary's Department has reached an agreement with Chris Lewin to work together on the development of further techniques for risk management within Government.

Chris is an experienced actuary, pensions manager, investment consultant and risk professional. He leads the joint risk management initiative between the actuarial and civil engineering professions, which has produced the methodology known as RAMP (Risk Analysis and Management for Projects) and a new guide to Enterprise Risk Management. He said, "GAD's work extends across the whole of Government, and I am confident that my experience can help to manage risks in a number of areas."

Government Actuary Trevor Llanwarne said: "I am looking forward to exploring additional practical ways of identifying, analysing and reducing the impact of risks, particularly those which have the potential to cause material shocks to the system."

Government Actuary's Department

The Government Actuary's Department (GAD) is an actuarial consultancy which has been working within government for almost a century. GAD offers actuarial services to governments and public sector organisations, in the UK and around the world, covering pensions, social security and insurance. Based in London, GAD employs 140 people, of whom 50 are qualified actuaries.
